

Standards for Pesticide Residue Limits in Foods

Article 1

The Standards are prescribed in accordance with the provisions of the second paragraph of Article 15 of the Act Governing Food Sanitation.

Article 2

Both the maximum residue limits referred in the Standards and the actually examined residues of pesticides are calculated on the basis of the weights of the produces in the forms on market.

The examination of pesticide residues shall include the pesticide itself and its metabolites.

Article 3

The pesticide residues in foods except livestock, poultry and fishery products shall meet the Standards for the Pesticides Residue Limits in foods Table, as Appendix Table 1. Pesticides not listed in the Table, shall not be detected.

Article 4

Pesticides listed in the Appendix Table 2 are highly safe, it is not necessary to set the maximum residue limits and examine their residues.

Article 5

No residue shall be detected for the pesticides prohibited for use by the agriculture authority, unless other regulations apply. The names of such pesticides are listed in the Appendix Table 3.

Article 6

The classification of crops referred in the Standards for pesticide residue limits in foods Table are listed in the Appendix Table 4.

Article 7

The Standards shall be implemented from the date of promulgation.
