## FLAVOURINGS PERMITTED FOR USE IN FOODSTUFFS

### 1 SCOPE AND FIELD OF APPLICATION

This standard is concerned with natural flavourings, and artificial flavourings permitted for use in food products intended for human consumption.

### 2 COMPLEMENTARY REFERENCES

- 2.1 GSO 9 " Labelling of Prepackaged Foods "
- 2.2 GSO 2500 " Additives Permitted for Use in Food Stuffs "
- 2.3 GSO 2365 " Guidelines for the use of flavorings in foods "
- 2.4 GSO 1931 " HALAL FOOD Part (1): General Requirement "

### 3 DEFINITIONS

- 3.1 Flavor: Is the sum of those characteristics of any material taken in the mouth, perceived principally by the senses of taste and smell, and also the general pains and tactile receptors in the mouth, as received and interpreted by the brain.
- 3.2 Flavorings: Are products that are added to food to impart, modify or enhance the flavor of food (with the exception of flavors enhancers considered as food additives according to GSO stated in item 2.2). Flavoring does not include substances that have an exclusively sweet, sour or salty taste (e.g. sugar, vinegar and table salt. Flavorings may consist of substances, natural flavorings complexes, thermal process flavorings or smoke flavorings and mixture of them and may contain non-flavoring food ingredients (item 3.4) within the condition mentioned in item (2.3). They are not intended to be consumed as such:
  - 3.2.1 Flavorings substances: Are chemically –defined substances either formed by chemical synthesis, or obtained from materials of plant or animal origin.
    - 3.2.1.1 Natural flavoring substances: Are flavoring substances obtained by physical processes that may result in unavoidable but unintentional changes in the chemical structure of the components of the flavoring (e.g. distillation and solvent extraction) or by enzymatic or microbiological processes, from material of plant or animal origin. Such material may be unprocessed, or processed for human consumption by traditional food- preparation processes (e.g. drying, roasting and fermentation). This means substances that have been identified/ detected in a natural material of animal

or vegetable origin.

- 3.2.1.2 Flavoring substances similar to natural flavor: Are chemically substances either formed by chemical synthesis, these substances are identical composition with a natural substance found in plant material or plant or animal origin, according to what is mentioned in Item 3.2.1.1 .
- 3.2.1.3 Synthetic flavoring substances: Are flavoring substances formed by chemical Synthesis
- 3.2.2 Natural flavoring complexes: Are preparation that contain flavoring substances obtained by physical processes that may result in unavoidable but unintentional changes in the chemical structure of the flavoring (e.g. distillation and solvent extraction), or by enzymatic or microbiological processes, from material of plant or animal origin. Such material may be unprocessed, or processed for human consumption by traditional food- preparation processes (e.g. drying, roasting and fermentation). Natural flavoring complexes include the essential oils, essence, or essence extractive, protein hydrolysis, distillate, or any product of roasting, heating, or enzymolysis.
- 3.2.3 Flavors prepared from smoke: Are complex mixtures of components of smoke obtained by subjecting untreated wood to hydrolysis in a limited and controlled amount of air, dry distillation, or superheated steam, then subjecting the wood smoke to an aqueous extraction system or to distillation, condensation, and separation the collection of the aqueous phase. The major flavoring principles of smoke flavorings are carboxylic acids, compounds with carbonyl groups and phenolic compounds.
- 3.2.4 Flavors prepared with thermal treatment: Are products obtained according to GMP by heating to a temperature not exceeding 180°C for a period not exceeding 15 minutes to a mixture of component ( not necessary to have the properties of flavorings, to be one of them at least contain nitrogen" amino" and the other a reducing sugar.
- 3.3 Flavor Enhancer  
Materials are used primarily in order to increase the impact of some of the flavor of food ingredients.
- 3.4 Non-flavorings food ingredients: Are food ingredients, such as food additives and foodstuffs that can be added to flavorings and are necessary for dissolving, dispersing, or diluting flavorings, or are necessary for the production, storage, handling and use of flavorings.

## 4 REQUIREMENTS
