### ADDITIONAL INFORMATION

*(Such information could include, inter alia, a more detailed description of the technical assistance required, any relevant background information on the reasons for the request, the possibility of using a regional approach to the provision of the requested assistance and the scope for a coordinated approach among relevant international organizations.)*

The South African Fresh Fruit industry is an important export industry. South Africa is also known for its export inspection and certification system, mostly with regard to quality of fresh fruit and vegetables. The major Fresh Fruit Export Industries are currently in compliance with importing country as well as buyer food safety requirements.

The need however exists to implement food safety programmes on a national level instead of only focussing only on export sector. It is therefore necessary to build capacity within government as well as within industry, also including the small growers. The National Department also envisage to establish a food safety component in the new structure which will require that officials in the Food safety component will be required to conduct risk assessments to determine the level of microbiological risk on fresh fruit and vegetables as well as to develop a monitoring programmes for both exports and well as local sales.

Auditing of these food safety programmes would require the inspection personnel to have competencies on GAP, GMP and HACCP auditing.

South African staple food of the poor are produced from grains. Industries such as the maize and wheat industries included mycotoxin surveillance programmes within their annual crop quality surveys. Although South Africa has grading legislation as well as health legislation dealing with mycotoxins there is a lack in official monitoring of mycotoxins as well no official integrated system to reduce and address the possibility of contamination. Assistance would thus be required to address these issues.

To put South Africa in a position to enter into equivalence agreements training on the evaluation of equivalence would be required.

A regional approach for capacity building should be followed, e.g.

- SADC or SACU country grouping
- NEPAD holistic approach
- Or following bilateral country agreements
