- i. Research and Education Category A means the use of one or more units of sealed and/or unsealed radioactive sources where any radioactive sources do not fall under Category 1 to 3 (based on Table 1 of Categorization of Radioactive Sources of the IAEA TECDOC-1344 as adopted in PNRI A.O. No. 1 Series of 2004)) and total amount of radioactivity to be possessed at any one time does not exceed 370 MBq.
- ii. Research and Education Category B means category other than Category A of the research and Education.
- iii. Portable Gauge Category A means category that falls under Category 5 (based on Table 1 of Categorization of Radioactive Source, IAEA Technical Document No. 1344) (e.g. XRF analyzers, etc.)
- iv. Portable Gauge Category B means category other than Portable Gauge category A.
- v. Fixed Gauge Category A means category that falls under Category 4 and 5 based on Table 1 of Categorization of Radioactive Source, IAEA Technical Document No. 1344 (e.g. thickness/fill-level gauges, static eliminators, etc.)

vi. Fixed Gauge Category B means category other than Fixed Gauge Category A.

Customer Premises Equipment (CPE) is/are equipment located in the premises of a customer or subscriber, for connection to public telecommunications network facilities⁴.

1. Private Branch Exchange (PBXs).
2. Key Telephone Systems (KTS).
3. Corded Telephone Sets.
4. Cordless Telephone Sets.
5. Special purpose terminal equipments designed to operate in conjunction with central office facilities to receive and transmit data from a subscriber's location or to operate in a manner that serves public interest. They include but are not limited to:
 - Alarm dialing and signaling equipment for industrial, security, fire, instruction and equipment failure applications.
 - Traffic Recorder or device for measuring the amount of traffic carried by a group or several groups of switches, lines or trunks and may have the capability of periodically printing a record of that traffic.
 - Variation Monitors or devices for sensing deviations in electrical characteristics of a line and capable of providing an alarm or initiating other actions when program of the electrical characteristics are exceeded.
 - Multiplexer or device that allows transmission of a number of different signals simultaneously over a single telecommunications channel. Concentrators are included in this heading.
6. Automatic dialer or a separate device that dials a call automatically over the public network. The device may include the capability to include dial attempts after encountering a busy signal.
7. Automatic Answering Machine or device connected to a telephone line which operates in such a manner that when the user is absent, the device answers calls and gives a recorded message and may or may not provide for recording of a short message for the caller.
8. Call distributor or a device that distributes incoming calls to different operating positions to spread traffic load and increase efficiency.
9. Data communications equipment (DCE) provides the functions required to establish, maintain and terminate a connection, the signal conversion, and coding required for communication between data terminal equipment and the public telecommunications network. DCE may or may not be an integral part of a computer (e.g. dial-up modem).
10. Data terminal equipment (DTE) consists of digital end instruments that convert user information into data signals for transmission, or reconvert the received signals into user information. The DTE may consist of a single piece of equipment that provides all required function necessary or it may be an interconnected subsystem of multiple pieces of equipment which together perform all the required functions.

11. Facsimile machine or device employed at the transmit end to convert a hard copy to electrical signals suitable for delivery to the public telecommunications network and at the receive end to convert picture signals to a hard copy.
 12. Teleprinter or device having a signal actuated mechanism for automatically printing received message. The device may also include a keyboard for manually sending line signals, a paper tape transmitter and paper tape punch/reader or the electronic equivalent of these. (Intended for connection to a telex network).
 13. Wireless Paging Receiver using selective radio signal to summon a person, exact whereabouts unknown, to the nearest telephone or to deliver a message to the person carrying the paging unit.
 14. Cellular Mobile Telephone Subscriber Terminal is a terminal unit connected to the cellular mobile telephone system which is a wide area mobile radio telephone system composed of clusters of cells capable of providing high-capacity mobile as well as fixed telecommunication services by utilizing frequency re-use techniques.
 15. Global Mobile Personal Communications by Satellite (GMPCS) terminal equipment connected to a satellite system providing telecommunications services directly to end-users anywhere in the globe from a constellation of satellite.
 16. Fixed Wireless Access Subscriber Unit is a fixed terminal equipment located at the end-user or subscriber's premises wherein it is connected to the public telecommunications network via the fixed wireless access system. Fixed wireless access is an access application using radio technology rather than copper wire or optical fibers to reach subscriber's premises in which the locations of the subscriber and the network access point are fixed.
 17. Very Small Aperture Terminal (VSAT) equipment is a technological innovation in the field of satellite communications that allows reliable transmission of information (voice, data and facsimile) via satellite using small satellite antennas.
 18. Credit Card Verification, Debit Payment and other similar Point of Sale (POS) transaction devices that utilize the public telecommunications network.
 19. Caller Line Identification Device (CLID) is a device connected or built-in to the telephone set that shows the identity i.e. the telephone number and/or registered name of the calling party.
 20. Advanced CPEs.
