METHODOLOGICAL NOTE

The Basis of Calculation of Agricultural Domestic Support

This is an explanatory note to be read in conjunction with the current Saudi domestic support notification.

1. The figures are expressed in Saudi Riyals, where the exchange rate has been fixed at USD 1 = SAR 3.75 since 1986.
2. Saudi Chinese Cooperation: In the context of this programme, specialists from China are contracted with in order to work in the Ministry of Agriculture. Similarly, Saudis are sent to this country to gain experience. In addition, laboratory equipment is provided to support these programmes.
3. In determining eligible production for wheat, it excludes 5% impurities and 5% Zakat from total production. The ratio of 5% impurities represents a general average based on samples analysis drawn randomly from wheat and barley received by GSFMO. The ratio of 5% Zakat is determined according to Islamic Rules (this percentage of Zakat is limited only on farming and differs from the normal Zakat on all kinds of money which is 2.5%).
4. The applied administered price of wheat has been reduced to SAR 1,000/tonne (or USD 266.67) since 2004.
5. External reference prices of wheat are expressed as CIF Jeddah. These reference prices are determined as a sum of (Export price of US Hard Winter Ordinary Protein, FOB US Gulf Ports) + Ocean Freight to Egypt (Alexandria) + USD 3/tonne as estimated freight from Alexandria to Jeddah (2001-2003 Base Year). (Source: Food Outlook of the Food and Agriculture Organization of the UN, No. 5, December 2002 and No.1 April 2005).
6. The external reference price for barley is calculated as the annual average of effective import prices for barley imported by GSFMO during the period 2001-2003 (Base Year).
7. Agricultural subsidies which are included in Supporting Table DS:9 are provided to all agricultural projects: wheat, poultry, dairy, sheep, greenhouse, vegetables and fruits, etc. These subsidies can be disclosed as follows: 25% of the price fixed by the Ministry of Agriculture for farm machinery; and the cost of poultry and dairy farms equipments.
8. The opportunity cost for agricultural loans represents the amount of total loans granted by the Agricultural Development Fund (ADF) multiplied by the average commercial interest rates because ADF does not charge interest on the granted loans (Annex 1).
9. Bad Debts for Agricultural Loans represent due balances carried forward for several financial years divided by ten. These amounts are based on a ten-year average because medium-term loans are extended for a period of ten years.
10. Calculation of livestock feed subsidy (Annex 2): the amount of subsidy per tonne on imported barley is the difference between the reference price and the price paid by the domestic livestock producers. The calculation of this subsidy is as following:
 - For imported barley: $IFBS = (E - P) * I$, where:
 - IFBS: Imported feed barley subsidy;
 - P: Price paid by livestock producers for barley;
 - E: External reference price (= world price C.I.F Jeddah); and
 - I: Quantity of Imported barley.
