With regard to transfer of technology, plant variety protection provides the basis for the transfer of technology (i.e. the varieties) in agriculture. Ownership of plant breeders' rights (PBR) could be shared in different ways according to the funding by the different parties of the breeding activity. PBR sets up the legal framework enhancing the relationship between researchers, PBR holders, licensees and users and facilitates dissemination of varieties to farmers.

The breeders' exemption provides also a mechanism to facilitate access to germplasm. The breeder's exemption under the UPOV Convention allows the breeder of a variety to enjoy the right of his variety whilst allowing other breeders to use the material of the protected variety for further breeding. Companies or individual breeders can use the protected varieties of other breeders freely and incorporate them into their breeding programs. If the resulting new variety is distinct, they can also exploit it freely.
