Product: Country or group Countries indicating maintaining measures: an interest:
Meat and edible offals Portugal Argentina
of the animals falling United States
within heading No. 01.01, 01.02, 01.03,
01.04, fresh, chilled or frozen
(02.01)

(a) Description:
State trading (for items under 01.02, 01.03 and 01.04, fresh, chilled or frozen).
Part of the heading is also subject to unspecified import restrictions (02.01.01, 02.01.03).

(b) Comments by other countries:

(c) Comments by country maintaining the measures:
In Portugal the "National Livestock Products Board" is the body legally responsible for co-ordinating meat marketing, with a view to adapting imports to the shortfall between domestic production and consumption.

Imports are effected through public tenders, opened for sufficiently large quantities. Stocks are usually held in refrigerated warehouses belonging to the public sector, the storage costs being charged to the Board.

The authorities have already endeavoured to make trade in certain specific products very flexible and liberal, for example, trade in certain chilled meat and certain types of meat required for the preserving industry. Such imports are carried out by the traders or industrialists concerned.

Product: Fish, fresh (live or dead), chilled or frozen (03.01)

(a) Description:
Global quota: cod, except frozen fillets (ex 03.01)

(b) Comments by other countries:

(c) Comments by country maintaining the measures:

(Applies also to 03.02)

With respect to cod, unrestricted imports were allowed in recent years on an experimental basis, and at the same time retail price controls were lifted. The results were disappointing because excessively large stocks were built up and, because of inadequate storage facilities, they deteriorated so that, as a result, exceptional measures had to be taken for the protection of consumers. Since this product is of great importance in the food habits of the population, the solution to the very unsatisfactory situation arising out of this liberalization experiment was to establish a flexible system for the grant of import licences, with periodic adjustments to take account of domestic production and consumption forecasts as well as of available cold-storage capacity. The restriction is essentially designed to protect consumers and avoid unnecessary foreign exchange expenditure. Imports fluctuate depending on the result of the catch, but are always at fairly high levels.

Milk and cream, preserved, concentrated or sweetened (04.02)

Country or group maintaining measures:
Porkugal

Countries indicating an interest:
Argentina
United States

(a) Description:

State trading: restriction (method unspecified)
Liberal licensing: milk in containers ready for consumption (ex 04.02).

(c) Comments by country maintaining the measures:

(Applies also to 04.03)

The justification for the quantitative restrictions on imports of these products derives from the support policy for stock-farming and more directly for milk production.

So far as milk is concerned, the restrictions mainly affect imports for industrial use; imports of milk put up for retail sale have been authorized regularly. In relation to domestic production, imports of milk are rather small. On the other hand, in certain years butter has been imported in fairly substantial quantities. There is a system of guaranteed prices for both milk and butter.

April 1982
| Product: (CCCN) Vegetables, fresh or chilled Potatoes (07.01) | Country or group maintaining measures: Portugal | Countries indicating an interest: Canada United States |

(a) **Description:**

Licensing (unspecified): seed potatoes (ex 07.01 A)

Discretionary licensing: potatoes for consumption (ex 07.01 A)

(b) **Comments by other countries:**

(c) **Comments by country maintaining the measures:**

A distinction must be made between seed potatoes and ware potatoes. Imports of seed potatoes are unrestricted except in the case of a few varieties which are not suited to the country's weather and soil conditions. In any event, there is no State trading. There are no import quotas for ware potatoes. Imports of these become necessary only when the domestic harvest falls short of current consumption requirements. Imports are effected by the trade, within the limits of specified ceilings, after the most favourable offers have been selected. In this selection, account is taken of certain variable factors such as price, variety, delivery date, etc. The purpose of the restriction on imports of ware potatoes is to ensure disposal of domestic production. Imports of ware potatoes fluctuate from year to year, but the volume of such imports is not very great in relation to production. With the exception of a few guaranteed prices which are fixed by the Government when the harvest is particularly abundant, no protection of any kind is afforded to domestic producers. It is not expected that this restriction can be eliminated.

(i) Wheat and other bread grains and also rice are customarily imported by industrial associations, and sometimes by merchants themselves in the case of maize.

State participation consists of setting import quotas and making the final decision regarding purchases to be effected through public tenders. Imports of other cereals – barley and oats – are subject to licensing and are carried out by merchants.

(ii) The quantitative restrictions are necessary in order to ensure disposal of cereal production on the domestic market.

(iii) The volume of imports is substantial only for wheat, maize and rice, and of course depends on the size of the harvest. So far as rice is concerned, this is only of marginal importance.

(iv) A guaranteed price and subsidies exist for wheat production.

April 1982
Product: Cereal flours (11.01)

Country or group indicating maintaining measures: Portugal

Countries indicating an interest: United States

(a) Description:

Restriction (method unspecified)

State trading

Licensing (unspecified): flour packaged for retail sale (ex 11.01).

(b) Comments by other countries:

(c) Comments by country maintaining the measures:

(i) Bread flour and flour for the manufacture of spaghetti and similar products are purchased by the same associations as bread grains (see item 10.01).

The existing restriction on imports of cereal flours is a consequence of the agricultural policy adopted for cereal production.

Flour put up for retail sale is imported directly by merchants, and is subject to a licensing system.

(ii) The volume of imports is not substantial.

(iii) There is no special protection for flour production.

(iv) No relaxation of the restrictions can be considered unless there is a completely different cereal production structure.

April 1982
**Product:** Starches, inulin  
**Country or group maintaining measures:** Portugal  
**Countries indicating an interest:** United States

(a) **Description:**
Restriction (method unspecified)

(b) **Comments by other countries:**

(c) **Comments by country maintaining the measures:**

(i) Liberalization is not feasible, mainly because of external factors.

The domestic industry cannot compete with foreign producers operating under a liberal system because purchase prices of raw materials are much higher.

It is fairly well known that in this sector producers in some countries benefit from marginal prices in the context of agricultural surplus disposal, but this is not the case in Portugal.

(ii) Imports are relatively small.

(iii) There are no other protective measures.

(iv) No elimination of the restrictions is contemplated, unless other measures were to be introduced in order to offset differences in the price of raw materials.

L/5265

April 1982
Product: Beet sugar and cane sugar, solid (17.01)

Country or group maintaining measures: Portugal

Countries indicating an interest: United States

(a) Description:

Global quota

(b) Comments by other countries:

(c) Comments by country maintaining the measures:

Supervision on a continuing basis is necessary because Portugal's sugar refining industry is subject to a special tax régime. Because of the existence of production quotas, allocated to factories in accordance with their industrial capacity and with domestic consumption, a quota system for raw sugar is necessary and liberalization is therefore not feasible. The operation of this industry is regulated by a legislative decree.

The restriction results from the particular conditions of the sugar refining industry and is not designed to provide protection to the cultivation of this product. Only a small quantity of sugar is produced in Madeira, which is of regional importance. All the sugar used by the refining industry is imported. As regards sugar that is already refined, imports are of an occasional character. There is no sugar beet or sugar cane cultivation. The refining industry does not enjoy any protection; it is even subject to a specific tax régime. The retail price of refined sugar is subject to a system of official approval, exclusively to protect the consumer. The sugar refining industry is at present in the process of being reorganized.
