The Working Party that conducted the second review under the Protocol of Accession of Poland requested the secretariat, in preparation for the third review and in consultation with the most interested delegations, to study the question of form and content of notifications for the purpose of item 1(c) under the plan for the annual review and to prepare a document thereon to be submitted to the Council not later than on 30 April 1970 (L/3315, paragraphs 24 and 25).

After having consulted these delegations, the secretariat suggests that the notifications should contain the following elements.

1. A list of products subject to discriminatory import restrictions on 30 June 1967 (or the nearest possible date for which information is available), expressed in customs tariff items (if possible sub-items) or statistical items, with an indication of item numbers.\(^1\)

2. A similar list for 1 January 1970 (or, if possible, a date closer to the third review), or a list of amendments up to 1 January 1970 (or, if possible, a date closer to the third review) to the list for 30 June 1967.\(^1\)

3. For products included in the lists referred to in 1 and 2 above, figures for imports from Poland (in value and/or quantity) for the last year (or, if possible, two years) for which statistical data are available.

Contracting parties finding it necessary to submit additional information, in particular regarding the progressive relaxation of the discriminatory element in the restrictions, in order to show that they have fulfilled the requirements of

\(^1\)The lists to be submitted by the European Communities would indicate the number of zones in which a product is subject to import restrictions.
the Protocol for the Accession of Poland, should transmit such complementary
notifications as they are in a position to establish.

The wish was expressed in the course of the consultations that governments
notifying that they do not maintain any discriminatory restrictions on imports
from Poland should submit import figures, in three digit SITC divisions or a
similar category, for their imports from Poland in the last two years for which
statistics are available. It was suggested in this connexion that the Working
Party might find it particularly useful to have at its disposal data on imports
from Poland into such unrestricted markets of products subject to quantitative
restrictions in the markets of other contracting parties.
