I. INTRODUCTION

1. The Working Party examined with the delegations of Australia and Chile the factual situation resulting from the removal, on the 1st July 1949, of nitrate of soda from the pool of nitrogenous fertilisers which is subsidised by the Australian Government. It then considered whether the measure taken by the Australian government constituted a failure by the Australian government to carry out its obligations under the Agreement, within the terms of Article XXIII.

Having come to the conclusion that the measure taken by the Australian government did not conflict with the provisions of the Agreement, the Working Party then examined whether the Australian measure had nullified or impaired the tariff concession granted by Australia to Chile on nitrate of soda in 1947, and agreed on the text of a recommendation which, in its opinion, would best assist the Australian and Chilean governments to arrive at a satisfactory adjustment.

II. THE FACTS OF THE CASE

2. Prior to the out-break of war in 1939, ammonium sulphate was distributed in Australia by a commercial pooling arrangement operated by Nitrogenous Fertilisers Pty. Ltd., a private enterprise; that corporation bought ammonium sulphate from the local producers (both by-product and synthetic sulphate) and from foreign sources of supply; the ammonium sulphate from all sources was sold to consumers at a uniform price. The distribution of imported sodium nitrate was effected by independent agencies.

3. In view of the scarcity of ammonium sulphate during the war, the Australian government purchased sodium nitrate from abroad and appointed Nitrogenous Fertilisers Pty. Ltd. to act as distributing agent for the Commonwealth for all nitrogenous fertilisers, which were sold to consumers at a uniform price of £A 16.10 per ton. During the first year of the operation of the pooling arrangement, the company could supply the market without any loss; during the later years, the Australian government undertook to meet the deficit of the company on the sales of both ammonium sulphate and sodium nitrate. This financial support by the Commonwealth government had the effect of a subsidy on imported fertilisers.
4. As from 1st July 1949, Nitrogenous Fertilisers Pty. Ltd. ceased to distribute sodium nitrate, the trade of which reverted to the pre-war commercial channels. The Australian government continued, however, to purchase abroad ammonium sulphate which it sold to Nitrogenous Fertilisers Pty. Ltd. at landed cost. The retail price of ammonium sulphate, both domestic and imported, was no longer fixed by government control; the price, therefore, rose by stages to £A. 22.10 per ton but the Australian government agreed to meet any loss on procurement or disposition of sulphate which might be incurred by Nitrogenous Fertilisers Pty. Ltd., up to an amount of approximately £A. 500,000.

5. On the basis of information supplied by the Australian representative, the financial implications of that arrangement for 1949-50 may be summarised as follows:

<table>
<thead>
<tr>
<th></th>
<th>1: estimated retail price on a commercial basis</th>
<th>2: retail price under the pooling arrangement</th>
<th>3: Gross difference between columns 1 and 2</th>
</tr>

<td>£A 33.0</td>
</tr>
</tbody>
</table>

Note: The weighted average of the quantities of ammonium sulphate listed under a) and b) above at the prices indicated in column (1) would give a selling price of £A. 25.12 in the absence of a subsidy. However, as some elements of cost cannot be estimated with perfect accuracy, the figure of £A. 28 per ton was indicated by the Australian representative as a fair maximum selling price of ammonium sulphate through Nitrogenous Fertilisers Pty. Ltd. pooling arrangement if no subsidy were maintained.

6. The subsidy on sulphate of ammonia was maintained because, inter alia, users of that fertiliser would have been prevented, by domestic price control and long-term contracts, from increasing their selling price in order to take account of the increased cost of ammonium sulphate which would have resulted from the discontinuance of the subsidy. The same conditions did not exist in the case of sodium nitrate as the agricultural producers who used most of that fertiliser were no longer subject to price control arrangements and adequate supplies to meet all demands were available. The un-subsidised retail price of nitrate of soda is estimated at £A. 33.10 by the representative of Australia and at £A. 31.10 by the representative of Chile. These prices may be compared with the price of £A. 28 per ton for ammonium sulphate referred to in the above note.
The Australian imports of sodium nitrate during the post-war period were limited to the amounts allocated by the IEFC until June 1949. The total imports mainly for industrial purposes are estimated at about 14,000 tons for 1949-1950 as compared with about 7,000 tons for 1948-1949. However, the Working Party took note of the information supplied by the Australian representative that the agricultural demand for nitrate of soda had dropped from 6,300 tons in 1947-48 to 450 tons in 1948-49 (when nitrate of soda was sold under the pooling arrangement at the same price and on the same conditions as sulphate of ammonia) and the same amount will probably be used in agriculture in 1949-50 under the new arrangements. The Chilean representative stated that during 1948/49 nitrate of soda was not sold under the same conditions as sulphate of ammonia, as the whole allocation made that year by the IEFC to Australia was assigned by the Australian Government for industrial purposes and due only to Chile's reiterated petitions was 450 tons withdrawn from industrial stocks and given to agricultural uses, leaving therefore a demand of more than 3000 tons without fulfilment.

III. CONSISTENCY OF THE AUSTRALIAN MEASURES WITH THE PROVISIONS OF THE GENERAL AGREEMENT

7. The removal of nitrate of soda from the pooling arrangements did not involve any prohibition or restriction on the import of sodium nitrate and did not institute any tax or internal charge on that product. The Working Party concluded therefore that the provisions of paragraph 1 of Article XI and of paragraph 2 of Article III were not relevant.

8. As regards the applicability of Article I to the Australian measure, the Working Party noted that the General Agreement made a distinction between "like products" and "directly competitive or substitutable products". This distinction is clearly brought out in paragraph 2 of Article III, read in conjunction with the interpretative note to that paragraph. The most-favoured-nation treatment clause in the General Agreement is limited to "like products". Without trying to give a definition of "like products" and leaving aside the question whether the two fertilisers are directly competitive, the Working Party reached the conclusion that they were not to be considered as "like products" within the terms of Article I. In the Australian tariff the two products are listed as separate items and enjoy different treatment. Nitrate of soda is classified as item 403 (C) and sulphate of ammonia as item 271 (B). Whereas nitrate of soda is admitted free both in the preferential and most-favoured-nation tariff, sulphate of ammonia is admitted free only for the preferential area and is subject to a duty of 12½% for the m-f-n countries; moreover, in the case of nitrate of soda the rate is bound whereas no binding has been agreed upon for sulphate of ammonia. In the tariffs of other countries the two products are listed separately; in certain cases the rate is the same but in others the treatment is different; for instance in the case of the United Kingdom nitrate of soda is admitted free whereas a duty of £4 per ton is levied on ammonium sulphate.

9. In view of the fact that paragraph 4 of Article III refers to "like products" the provisions of that paragraph are not applicable to the present case for the reasons set out in paragraph 8 above. As regards the provisions of paragraph 9 of the same Article, the Working Party was informed that a maximum
serving price for ammonium sulphate was no longer fixed by governmen
tal action and, in any event, noted that Australia had considered the Chilcan complaint and had made an offer within the
terms of that paragraph. Since it was not found that any of the
substantive provisions of Article III were applicable, the exception
contained in paragraph 8 (b) is not relevant:

10. The Working Party then examined whether the Australian gov-
ernment had complied with the terms of Article XVI on subsidies.
It noted that, although this article is drafted in very general
terms, the type of subsidy which it was intended to cover was the
financial aid given by a government to support its domestic pro-
duction and to improve its competitive position either on the
domestic market or on foreign markets.

Even if it is assumed that the maintenance of the Australian
subsidy on ammonium sulphate is covered by the terms of Article
XVI, it does not seem that the Australian government's action has
been in conflict with the provisions of that Article. It is
recognized that the Contracting Parties have not been notified by
the Australian Government of the maintenance of that subsidy, but
the Working Party noted that the procedural arrangements for such
notifications under Article XVI have only been approved by the
Contracting Parties at their present session, and that they only
require notification after imposition of the measure. Moreover,
the Chilean Government has not suffered any injury from this
failure to notify the Contracting Parties as it is established that
the Chilean Consul General had an opportunity to discuss this
matter with the Australian authorities before the decision to dis-
continue the subsidy on sodium nitrate had been enforced. The
Australian Government has discussed with the Chilean Government
the possibility of limiting the effects of the subsidization and
has also agreed to discuss the matter with the Contracting Parties,
in accordance with the provisions of Article XVI.

11. Within the terms of reference of the Working Party, the
examination of the relevant provisions of the General Agreement thus
led it to the conclusion that no evidence had been presented to
show that the Australian Government had failed to carry out its
obligations under the Agreement:

IV. NULLIFICATION OR IMPAIRMENT OF THE CONCESSIONS
GRANTED TO CHILE ON SODIUM NITRATE

12. The Working Party next considered whether the injury which
the Government of Chile said it had suffered represented a nulli-
fication or impairment of a benefit accruing to Chile directly or
indirectly under the General Agreement and was therefore subject
to the provisions of Article XXIII. It was agreed that such im-
pairment would exist if the action of the Australian Government
which resulted in upsetting the competitive relationship between
sodium nitrate and ammonium sulphate could not reasonably have been
anticipated by the Chilean Government at the time it negotiated
for the duty free binding on sodium nitrate, taking into considera-
tion all pertinent circumstances and the provisions of the General
Agreement. The Working Party took note of the facts that neither
fertilizer was subsidised before the war, that the Australian
Government had applied under its war powers a subsidy to both
sodium nitrate and ammonium sulphate at the same time, and that, in
the light of the post-war fertilizer shortage, the subsidy was still
maintained at the time of the 1947 tariff negotiations. The
Working Party concluded, therefore, that the Government of Chile had
reason to assume, during these negotiations, that the war-time
fertilizer subsidy would not be removed from sodium nitrate
before it was removed from ammonium sulphate. For these
Reasons, it also concluded that the Australian action should be considered as relating to a benefit accruing to Chile under the Agreement and that it was therefore subject to the provisions of Article XXIII. In reaching this conclusion, however, the Working Party considered that the removal of a subsidy, in itself, would not normally result in nullification or impairment. In the case under consideration, the inequality created and the treatment that Chile could reasonably have expected at the time of the negotiation, after taking into consideration all pertinent circumstances, including the circumstances mentioned above, and the provisions of the General Agreement, were important elements in the Working Party's conclusion.

The situation in this case is different from that which would have arisen from the granting of a new subsidy on one of the two competing products. In such a case, given the freedom under the General Agreement of the Australian Government to impose subsidies and to choose the classification on which a particular subsidy could be granted, it would be more difficult to say that the Chilean Government had reasonably relied on the continuation of the same treatment for the two products. In the present case, however, the Australian Government, in granting a subsidy on account of the wartime fertilizer shortage and continuing it in the post-war period, had grouped the two fertilizers together and treated them uniformly. Under such circumstances it would seem that the Chilean Government could reasonably assume that the subsidy would remain equally applicable to both fertilizers so long as there remained a local nitrogenous fertilizer shortage. The Working Party has no intention of implying that the action taken by the Australian Government was unreasonable but simply that the Chilean Government could not have been expected during the negotiations in 1947 to have foreseen such action or the reasons which led to it.

13. Having thus concluded that there was a prima facie case that the value of a concession granted to Chile had been impaired as a result of a measure which did not conflict with the provisions of the General Agreement, the Working Party considered the best method of assessing the extent of such impairment. As indicated above, the Working Party came to the conclusion that there was no infringement of the Agreement by Australia; and, since Chile had not applied for a release from any of its obligations under the provisions of the last two sentences of paragraph 2 of Article XXIII, and it was moreover hoped that an adjustment of the matter satisfactory to both parties could be reached (without prejudice to the views of either on the merits of the case), it was not necessary for the Working Party to consider whether the above-mentioned provisions were applicable to the case.

14. The Chilean representative stated that his government did not press for a discussion of the question of the degree of damage sustained and would be satisfied if an arrangement could be made to remove the cause of the present competitive inequality between the two fertilizers. Such an arrangement would not necessarily involve the restoration of the previous method of subsidization. The Chilean representative suggested that no subsidy be granted for both fertilizers or that, if the Australian Government wishes to subsidize certain agricultural products, the subsidy might be paid on fertilizer used by the producers of those crops which it desires to subsidize, without distinction between types of fertilizer. Thus, wherever one nitrogenous fertilizer is subsidized for a particular crop, the
other would receive equal subsidization.

15. As the declared intention of the Australian Government in maintaining the subsidy on ammonium sulphate was to give financial aid, not to the producers of a certain type of fertilizer, but to the producers of certain crops, whose selling price was limited by price control and who preferred to use ammonium sulphate for technical reasons, irrespective of price considerations, the Working Party came to the conclusion that a satisfactory adjustment would be achieved if the Australian Government could consider the possibility of modifying the present arrangements in such a way as to achieve that object while giving to the two types of fertilizers equal opportunity to compete on its market.

16. In the light of the considerations set out above the Working Party wishes to submit to the Contracting Parties the following draft recommendation which, in its opinion, would best assist the Australian and Chilean Governments to arrive at a satisfactory adjustment. In making this recommendation the Working Party wishes to draw attention to one point of particular importance. There is in their view nothing in Article XXIII which would empower the Contracting Parties to require a contracting party to withdraw or reduce a consumption subsidy such as that applied by the Government of Australia to ammonium sulphate, and the recommendation made by the Working Party should not be taken to imply the contrary. The ultimate power of the Contracting Parties under Article XXIII is that of authorizing an affected contracting party to suspend the application of appropriate obligations under the General Agreement. The sole reason why the adjustment of subsidies to remove any competitive inequality between the two products arising from subsidization is recommended is that, in this particular case, it happens that such action appears to afford the best prospect of an adjustment of the matter satisfactory to both parties.

17. The following is the text of the draft recommendation submitted by the Working Party to the Contracting Parties:

The Contracting Parties recommend that the Australian Government consider, with due regard to its policy of stabilizing the cost of production of certain crops, means to remove any competitive inequality between the two products which may in practice exist as a result of the removal of nitrate of soda from the operations of the subsidized pool of nitrogenous fertilizers and communicate the results of their consideration to the Chilean Government, and that the two parties report to the Contracting Parties at the next Session.
