Addendum

Danish Control Measures to be Applied to Skimmed Milk Powder Imported for Purposes of Animal Feed

Import licences for skimmed milk powder to be used for animal feed, issued by the Grain and Licensing Office of the Ministry of Agriculture, will be granted only if the importer expressly declares that the powder will be used for animal feed only. Such import licences will be provided with the following clause: "This licence is valid only for milk powder imported for animal feed." Before the powder is distributed in Denmark, the packing shall be marked "For animal feed only". The marking shall be conspicuous and difficult to remove.

Invoices and delivery notes made out for re-sales shall always be provided with a clause showing that the goods may be used for animal feed only.

Control of the importer's disposal of the imported skimmed milk powder is exercised by the Grain and Licensing Office of the Ministry of Agriculture.

Under a provision promulgated by the Ministry of Agriculture imported milk powder shall not be brought into any dairy. The observance of this provision is supervised by the Government Controller of Dairy Products and Eggs.

As the rules governing the customs clearance of skimmed milk powder are different for powder to be used for human consumption and powder to be used for animal feed, the two categories of powder are separated already at the point of entry into Denmark. A customs duty of 20 per cent ad valorem is levied on powder for human consumption, while powder for animal feed is imported free of duty, but a compensatory charge is levied on the latter category in order to bring the price of powder imported for animal feed up to a specified level.

Contraventions of these provisions are punishable by fines.

The rules governing imports of skimmed milk powder for animal feed have been administered by the Ministry of Agriculture for a number of years and have not given rise to any difficulties.

Approved by the Management Committee and recorded on 14 May 1970
