In the course of the review of licensing systems held on 19-22 October 1971, delegations supplied additional factual information which it was agreed should be reproduced and made available to the Group. The attached sheets, prepared on a country-by-country basis contain this supplemental information.¹

¹These sheets supplement and should be read in conjunction with the relevant replies in COM.IND/W/55 and addenda (COM.AG/W/72 and addenda). The figures appearing at the beginning of the various paragraphs in the attached sheets indicate the question numbers of the questionnaire to which the additional information relates in each case.
Australia

1. The power to impose quantitative restrictions on additional products is vested in the Minister or his delegate.

6(j) Australia does not require importers to present export permits or export licences issued in an exporting country. When the export restraint arrangements with Hong Kong were operating, the Hong Kong authorities advised the Australian authorities on a monthly basis of the licences granted. This was accepted by Australia for the purpose of controlling the level of imports on the particular product concerned. The restraint arrangement which is described in answer 6(i), expired on 30 June 1971.

19. In Australia, foreign exchange is readily available from any Australian bank. It is a purely commercial transaction.

\[1:\text{See COM.IND/W/55/Add.1.}\]
Austria

1. The reply in COM.IND/W/55/Add.2 relates only to licensing subject to quantitative restrictions. Only three items in the industrial sector are covered by this system, while the agricultural products subject to restriction are set out in L/3210/Add.5/Rev.1. Imports of cotton textiles come within the scope of the Long-Term Arrangement.

As regards imports of liberalized goods, a procedure is applicable whereby the customs officer, at the time of customs clearance, checks whether the product is liberalized and whether it comes from a country to which Austria has extended its liberalization. If these conditions are fulfilled, the customs officer affixes a rubber stamp on the form for customs clearance. The customs officer is obliged to admit these products and cannot refuse the import of liberalized goods. There is no form to be completed nor is there any special fee or charge. The examination is carried out in only one office. It is considered that the procedure is limited to a bare minimum and is not a hindrance to trade, at least from the point of view of licensing. In Austria's view, it is not licensing in the proper sense. The system is used also for statistical purposes. When importing into Austria, the importer has to submit a statistical entry form which goes to the statistical office.

6(a) Interested parties have the opportunity to ask the licensing authority for all information and details, and will certainly get replies concerning the imports they propose to make. It is considered more useful for an importer to have up-to-date information upon inquiry than a publication which may become out of date fairly quickly.

6(b) The amounts of global quotas, which were introduced when Austria started to implement its programme of liberalization, were determined by combining the amounts of all quotas existing with respect to a particular product, together with a certain amount to cover imports taking place outside the quotas. These quotas have been increased yearly by a certain percentage. The majority of global quotas have now been removed and the products liberalized. Global quotas exist only for wine, fruit juices, potatoes, wheat and maize, starch, preserved meat, certain medicaments and films.

1See COM.IND/W/55/Add.2.
6(c) There is no possibility in Austria to compel an importer to carry out imports for which he has got a licence, nor can the Government influence the effective utilization of quotas. If there should remain an unused portion of the quota, which is seldom the case, such unused portion would not be transferred automatically to the next quota year. However, utilization of such an unused portion during the new quota year could be provided for by granting prolongations of licences already unused with respect to items falling under the old quota year. The unused portion which has not been used before the end of the quota year can be transferred into the new quota period.

Austria would have some difficulties to give the names of importers, to whom licences had been granted, to governments. In Austria, there is an overall principle of secrecy which would be infringed if names of licencees were made known.

6(f) If the importer cannot effect imports of a product because the validity of his licence is limited to six months, he is free to ask for prolongation of his licence. Applications for prolongation have to be submitted in writing to the licensing office. As a rule, prolongations are granted for a three-month period, and can be given several times.

6(g) Applications are considered by a single administrative organ. For industrial products, the organ is the Federal Ministry for Trade and Industries; for agricultural products, the Federal Ministry for Agriculture and Forestry. For importing alcohols falling under monopoly, the organ is the Monopoly Administration, namely the Federal Ministry of Finance.

6(h) The last period of reference is, in fact, the previous year.

11. When importing to Austria, the following documents have to be produced by the importer: (a) designation of the product, (b) declaration of value (c) statistical entry form. If the product to be imported is not liberalized, a valid import licence has also to be submitted and, in certain cases, certificates of origin. In particular cases, additional certificates have to be presented e.g. for sanitary or phytosanitary purposes. For certain agricultural products falling under the marketing law, a decision of the Grain Equalization Board or of the Meat Board has to be produced.
Certificates of origin may be required upon importation by special decree of the Ministry of Trade or Ministry for Agriculture and Forestry. The cases where certificates of origin have to be presented are defined in the Austrian Foreign Trade Law (Federal Gazette No. 314, 1968, paragraph 12). These cases are the following:

(a) if required on the basis of a decision taken by an international organization of which Austria is a member

(b) for the implementation of trade policy agreements and other international arrangements

(c) for overall economic considerations, in particular for the maintenance of Austrian exports

(d) to avoid by-passing of the Austrian provisions concerning liberalization.

In practice, certificates of origin are mainly required for the purpose outlined in (d) i.e. to ensure that imports originate in countries to which Austria has extended liberalization.
4. Until 1 January 1970, all imports from Japan and Korea were subject to licensing. Commodity List B comprises a list of eight headings or sub-headings for which licensing is now applied vis-à-vis Japan and Korea. Of these eight items, five relate to products to which quantitative restrictions are applied while, in the case of the remaining three items, licensing is, in effect, free.

The purpose of the automatic licensing or tentative liberalization, is to provide, by way of safeguard, an easy method to reintroduce restrictions, if developments show a need. However, reintroduction of restrictions in these circumstances, has never occurred. The same remarks apply to Denmark's liberalizations vis-à-vis imports from State-trading countries.

19. "Normal commercial practice" is understood to mean commercial credits of one to two years, or five years for larger capital goods. The notice of payment to be filed is a separate document designed for statistical purposes.

---

1 See COM.IND/W/55/Add.6.
European Communities and their Member States

EEC Commission

Annex 1

(1) Outline of system

1. As regards Regulation 1025/70, the system of surveillance envisaged could be applied to goods from some countries. There is now one product from a GATT country under surveillance (see Commission Regulation 1755/71 of 10 August 1971).

(4) Use of licensing to restrict imports

In the second paragraph the words "fifteen working days" should be replaced by "five working days".

As regards other methods, it is not possible, since six separate administrations are involved, to employ computers at present to perform the function achieved by the system of surveillance.

---

1 See COM.IND/W/55/Add.7 (pages 3-8).

2 J.O. L/181/10 of 11.8.71
Benelux

All products originating in the countries enumerated in reply (2-3) are subject to the licensing régime. Licences, for some of the products from these countries, serve to implement quota restrictions. Licensing is also used to facilitate possible recourse to a safeguard clause. In this connexion, licensing provides the Benelux authorities with better and more detailed statistics than would otherwise be provided. All licences are granted automatically on request.

1. Price surveillance, in the importation of textiles, including cotton textiles, is linked to the régime of automatic licensing.

5. Under Belgian law, the King can regulate the import, export and transit of goods. The Parliament has, thus, delegated its power to the King, who according to the same law can delegate his power to designated Ministers. It is then the King, or his Minister who decides which country or product should be subject to licence. The same applies to the Netherlands.

11. In Benelux, there is no established rule for certificates of origin. Generally, such a certificate is required when a deflection of trade is noted or there is a serious risk of such deflection. In such circumstances, the Benelux authorities can decide that imports should be accompanied by a certificate of origin delivered by the competent authorities of the exporting country. In certain other cases (implementation of international agreements) a certificate of origin can also be required. In the case of imports from Japan, no certificate of origin is required.

12. In Belgium (though not in Netherlands) a stamp fee is required (BF 10 for imports of less that BF 10,000 and BF 20 in other cases). This fee, which is considered to be a modest one, does not correspond to the services rendered. The fee is required for all types of licences.

19. The application for licence is, at the same time, an application for a priority certificate.

1 See COM.IND/W/55/Add.7, pages 15-20.
France

1. The "exceptional instances" mentioned refer to imports of ECSC and Euratom products, imports of products under tariff quotas and products from EEC countries benefiting from "free pratique".

   All details, as regards territorial area, are contained in the "Journal Officiel" of 30 September 1966. Technical visas serve the purpose of statistics, to check origin, price and to implement the agricultural policy.

6(a) The information is published in "Moniteur Officiel du Commerce", the official organ of the National Centres of Foreign Trade. The information is reproduced by all the specialist organs.

6(b) Licence applications are processed within five days in principle. However, the time for processing depends on the merit of the case; there is no exact period. In certain cases, a licence can be granted in one day.

19. No special formality must be fulfilled for obtaining the foreign exchange.

---

1See COM.IND/W/55/Add.7, pages 21-24.
Federal Republic of Germany

1. The requirement of an import declaration has been removed for agricultural products. It is the intention to remove it in the field of industrial products to the extent possible.

3. All details are to be found in the import list (see paragraph 5(b)) and in the invitations to submit tenders (see paragraph 6(a)) both published in the Official Gazette (Bundesanzeiger). Any further information is given by the licensing authorities. (See paragraph 6(g).)

19. Statistical announcements for payments in foreign exchange are required. These are purely for statistical purposes and have no connexion with the treatment of goods under the import system.

1 See COM.IND/W/55/Add.7 (pages 25-29).
Italy

1. Automatic licensing is necessary for statistical purposes. Because of the time normally involved in processing statistics, licensing is necessary for this purpose.

As regards "controlled customs régime" there is no formality involved, and licences are issued immediately.

7(a) Licences are processed in four to five days maximum. In certain cases, they can be processed in one day.

19. There are no other formalities for issue of foreign exchange.

---

1 See COM.IND/W/55/Add.7, pages 30-38.
Japan

1. Both the Automatic Import Quota system and the Automatic Approval system relate to systems of liberalized imports. When the Government liberalizes items on the Import Quotas List, some of them require surveillance from a domestic point of view, particularly in cases where there is resistance to liberalization. It may be desirable to put such an item temporarily under the AIQ system and thus avert the pressure from protectionist forces. The Government is trying to phase out the system, and only eleven items are now on the AIQ List. It should be noted that of the twenty items removed from the IQ List on 1 October 1971, nineteen were transferred to the AA List and only one to the AIQ List. It is not Government policy to transfer items from the AA List to the AIQ List; the transfer is always in the opposite direction.

It is not possible to state when the AIQ system will be abolished. There are still forty items on the IQ List; some of these, when liberalized, would be best placed temporarily on the AIQ List. The AIQ system is not a restrictive one, one Japan's view.

4(b) The early return of statistical information concerning AIQ items is to facilitate the Government to watch the trend of imports, using such information to mitigate protectionist pressures. Moreover, the constant watch of the trend of imports is useful to facilitate any possible Article XIX action.

6(a)(ii) It is the policy of the Japanese Government to remove restrictions and also to increase the quotas for items still under restriction. If governments through embassies in Tokyo, request the Japanese Government to disclose the amount of quotas, it is ready to supply the data. One reason for not publishing the quotas is that for some products, publication of the amount of quotas would lead to increase in prices of the supplying country. A second and more important reason for not publishing the size of quotas arises from the fact that Japan increases its quotas each year; publication of the quotas might lead to resistance from domestic producers.

1See COM.IND/W/55/Add.11.
6(g) The single organ in charge of quota allocation is the Bureau of international trade of the Ministry of Trade and Industry. There are several cases in which it is necessary to consult with other responsible organs, e.g. for agricultural products, the Ministry of Agriculture; for nuclear products, the Agency of Science and Technology.

6(h)(i) One part of the quota (e.g. 60 per cent) is allocated according to criterion (1) viz past performance; the other part (e.g. 40 per cent) is allocated according to criterion (2), viz equal distribution per applicant. Quota allocations to users are normally made on the basis of request.

6(h)(iii) There is no general rule as to what is "appropriate" in permitting new importers to apply for quotas. The decision is made on a case-by-case basis. When quotas are enlarged considerably, new importers are added to the list.

7(a)-(b) In Japan, there is a general requirement under the present legislation to obtain Government approval before making payments to foreign countries, or in foreign currencies. In many cases, approval may be obtained through the authorized banks which have about 1,000 branches throughout Japan. Although it is necessary to seek this approval prior to the date of importation, in Japan's view it does not add to the burden on importers. For making any agreement or settlement, it is normal for an importer in any event to go to a bank. Only a very simple application has to be completed (attached to reply to questionnaire).

8. The "prescribed conditions" for import approval are, as stated in reply 18. Applications are seldom refused. In case of refusal, however, it is not the practice of the Japanese Government to inform the applicant of the reasons for refusal. If the applicant makes a special request to be informed of the reasons for refusal, he will be informed. Applicants, in the event of refusal, can resort to the Court under the procedure for examining complaints regarding administrative actions.

9(a) Where it is not appropriate to admit newcomers, allocation is limited to importers with a past record. If the allocation is distributed to too many newcomers, the amounts will be too small for commercial transactions. Taking into account such considerations, a decision is made whether or not to permit newcomers.

"Raw materials for industrial use" relate to coking coal and sulphur.
16. Certificates under the AIQ and AA systems are transferable.

19. Japan does not consider that there is any inconvenience in requiring import approval before the agreement on the settlement of payments. It is natural that importers go to banks to get foreign currency. At the same time, they have to file an application for import approval. Under the import approval system, the importer is entirely free to make the payment for commodities. While the Japanese system is connected with exchange control, this control is not very restrictive.

Under Japanese law (the Foreign Exchange and Foreign Trade Law), all payments abroad and payments in foreign currencies are subject to approval by the Government. The Japanese system is not much different to practices of other countries. Its foreign exchange control is permitted by the International Monetary Fund, and is also accepted in OECD.
PART I

1, 2, 3. Most industrial products are on the free list. The countries to which licensing or quotas apply are set out in the Bulletins from the Ministries.

5. The Norwegian Government may change the procedure, countries of origin, etc. without the consent of the Parliament. The Provisional Act of 1946 lays down a general ban on imports. The King (the Government) may grant dispensation from this general ban. The King has accordingly authorized the Ministry of Commerce and the Ministry of Agriculture to issue licences and to lay down special conditions for the licences.

---

1 See COM.IND/W/55/Add.13.
Poland

11. As soon as a general licence is granted by the Minister of Foreign Trade, in the form of annual foreign trade plans assigned to foreign trade organizations, such organizations issue individual licences. Only two basic documents are required upon actual importation (a) the general licence (b) the commercial contract.

16. Licences are, in principle, not transferable. If, however, foreign trade rights of a certain foreign trade organization are transferred to any industrial organization, all the obligations including the licences of the foreign trade enterprise are automatically taken over by the industrial organization concerned.

18. There are no other administrative procedures required prior to importation.

---

1See COM.IND/W/55/Add.14.
South Africa

1. In December 1969, South Africa decided to disinvoke its recourse to Article XII as justification for its remaining restrictions. It was pointed out then that import control, as a balance-of-payments instrument, had been applied in South Africa for twenty years previously. The economic structure of the country has changed considerably during the past twenty years. Accordingly, it has been necessary to make certain adjustments particularly in the tariff field. It was also pointed out, at that stage, that it would not be possible to dismantle all restrictions until such time as South Africa was released from its tariff commitments. Development objectives would be jeopardized if import control were discarded while tariffs were bound. In any event, the existing system is considered to be a relatively simple one and does not act as a major restriction on trade.

1See COM.IND/W/55/Add.36.
Spain

1. Every year, regularly, new products are included within the general framework of global quotas. Accordingly, Spain is implementing the recommendation made by the IMF in respect of Spain. In 1959, it should be recalled, all imports were subject to quantitative restrictions and were governed by the individual licensing system. Spain is continuing to liberalize its imports.

6(e) As regards time required for global quotas, the administration must review fully all applications made, in order to make an equitable and reasonable distribution. In some cases, when fairly complex global quotas are being dealt with, a longer period than one month is necessary.

1 See COM.IND/W/55/Add.27.
3. With effect from 15 October 1971, licences are no longer required for all goods imported from Japan. As from that date, imports of 564 BTN four digit items have been exempted from the licence requirement. Among the goods imported from Japan, for which licences are still required, a few products are subject to quota treatment. The purpose of the licensing for non-quota goods is to enable the authorities to watch closely the developments of imports. Such licences are issued without any formality.

5. A decision by the Parliament is not required to abolish or modify the licensing system. The Board of Commerce has the power upon authorization by the Government to decide which goods may be exempted from the import prohibition. It was such an authorization given to the Board of Commerce that permitted it to exempt the 564 BTN items from licensing vis-à-vis Japan (see 3 above).

6(d) The time for submission of application is, in principle, nine months.

7(a) There is no fixed time for processing of application. It may very well be that licences are issued almost immediately.

\[1\] See COM.IND/W/55/Add.16.
8. Reasons for refusal are given and there is possibility of appeal. However, in the case of certain war materials, especially explosives, there is no possibility of appeal.

1 See COM.IND/W/55/Add.17.
2. The purpose of maintaining the Open General Licence is to enable anyone
to import without restriction any goods to which the licence applies. The
Open General Licence is, in effect, a description of all the goods that can
be imported freely without any further formality or procedure. Goods may be
added to or taken from the list by simple amendment from time to time. If a
product is on the Open General Licence, an importer is absolutely certain that
he can import it freely.

6(e) Sometimes, a decision whether to issue a licence is taken immediately on
receipt of the application. On other occasions, the decision is not taken
immediately but normally no more than three weeks elapse between the receipt
of an application and notification to the importer of a decision whether or
not the licence will be issued.

The response has to be considered in conjunction with paragraph 6(d) -
the time allowed for submission of application, which varies from case to case.

If applications are made well in advance of the import, there might be a
time lapse before a decision is taken. However, licences can be and are issued
immediately where circumstances so require.

---

1 See COM.IND/W/55/Add.22.
No licensing system is maintained for any product under voluntary restraint.

Certain products such as wheat, cotton and peanuts, while subject to quantitative restrictions, are not subject to licensing. This arises because there is relatively little demand for these imports since United States prices are at or very near world prices. It has not been found necessary to introduce a licensing system which would require complicated administrative procedures. The United States has very accurate methods of securing information regarding imports. It is possible to assess, on a daily basis, the value of imports which come into all United States ports.

The sugar legislation in the United States has been recently amended.

The TSUS numbers of the products subject to licensing have been made available to the Joint Working Group.

Petroleum

3. These restrictions are maintained for national security reasons and it has not been found necessary to impose them on imports from Canada and Mexico, which have an overland route into the United States.

4. As regards alternative methods, the tariff on petroleum imports is not adequate to accomplish the purpose. For this reason, the import quotas have been instituted. The United States has considered other methods to accomplish this purpose but has not found them satisfactory.

5. The President has discretion under the national security provisions of the Trade Expansion Act to determine the products, and the volume of the products, that may be imported. Changes can be made in the system without any reference to the Congress.

---

1See COM.IND/W/55/Add.18.
