Annex 1(c)

COUNCIL REGULATION (EEC) No 2915/79
of 18 December 1979
determining the groups of products and the special provisions for calculating
levies on milk and milk products and amending Regulation (EEC) No 950/68 on
the Common Customs Tariff

THE COUNCIL OF THE EUROPEAN
COMMUNITIES,

Having regard to the Treaty establishing the European
Economic Community,

Having regard to Council Regulation (EEC) No
804/68 of 27 June 1968 on the common organization
of the market in milk and milk products (1), as last
amended by Regulation (EEC) No 1761/78 (2), and in
particular Article 14(6) thereof,

Having regard to the proposal from the Commission,

Whereas the provisions of Council Regulation (EEC)
No 823/68 of 28 June 1968 determining the groups
of products and the special provisions for calculating
levies on milk and milk products (3), as last amended
by Regulation (EEC) No 1000/78 (4), have been altered
several times; whereas it seems desirable for the sake
of clarity to recast this Regulation;

Whereas the products referred to in Article 1 (a) (2)
and (b) to (g) of Regulation (EEC) No 804/68 should
be divided into groups, each group being composed of
products with sufficiently comparable characteristics
for trade purposes; whereas the most representative
product for each group should be described as the pilot
product;

Whereas, however, special provisions must be made
for calculating the levy on assimilated products where
the levy calculated for the pilot product does not
correspond to the difference between the prices of
those products in world trade and on the Community
market;

Whereas, for products containing sugar, the levy must
include a fixed component representing the value of
the sugar used in their manufacture; whereas in such
cases the milk component of the levy on those
products must be derived by means of a coefficient
expressing the weight ratio between the milk ingredi­
ents and the product itself;

Whereas, for powders with a fat content of over
1.5 %, the levy, or in the case of compound products
or products in small packages the milk component of
the levy, should be calculated on the basis of the fat
content of the pilot product unless the fat content of
those various products is greater than that of the pilot
product; whereas, in the latter case, the levy or the
milk component of the levy must be calculated on the
basis of a standard fat content corresponding to that of
the products on the market;

Whereas the most usual ingredients of compound
feedingstuffs and those having most effect on price
formation are cereal products and milk products;
whereas, therefore, provision should be made for calcu­
librating the levy on these foodstuffs on the basis of their
starch and milk product content; whereas, however, a
starch content of not more than 10 % need not be
taken into account; whereas, with this method of
calculation, feedingstuffs must be grouped under tariff
headings according to the contents referred to above
and a standard starch and milk product content must
be taken into account for each tariff heading; whereas
the lowest possible starch content and the highest
possible milk product content should be used for this
purpose; whereas, in fact, milk ingredients have a
much greater effect on price formation than cereal
ingredients; whereas the cereal component of the levy
may be derived, on the basis of the starch content
assumed, from the average levy on maize, that being
the product most commonly used in the manufacture

(4) OJ No L 130, 18. 5. 1978, p. 7.
of compound feedingstuffs; whereas the most usual milk ingredient of compound feedingstuffs is skimmed-milk powder; whereas, therefore, the levy on that product should be used to calculate the milk component of the levy; whereas the levy on compound feedingstuffs must include a fixed component for the protection of the processing industry; whereas the component is likely to offset the disparity between Community prices and world market prices for products other than cereals and milk products which may be used in compound feedingstuffs;

Whereas, for processed cheeses other than those derived from Emmentaler, Gruyere or Appenzell and for the same reasons as led to the adoption of the present system, a system for deriving the levy should be adopted which is identical to that used for those products hitherto; whereas a central feature of this system is the use as calculation factors of the levies on butter and on the pilot product of Group I; whereas a change in the manufacturing process of these products and a growth in demand for a product with a higher fat content have shown that the percentages used hitherto for such derivation do not in all cases allow the objectives of the levy system to be attained; whereas, therefore, they must be fixed at more suitable levels;

Whereas the quantity of primary milk products required for the manufacture of fresh cheeses and curds is less than that required for the manufacture of the pilot product of the group; whereas, therefore, a levy derived from the levy on the pilot product should be applied to these primary products, that levy being adjusted by a coefficient expressing the overall ratio of the abovementioned quantities;

Whereas for certain kinds of fresh, condensed or concentrated milk with a high fat content the levy may be calculated on the basis of the levy on butter, using standard coefficients representing the fat content ratio; whereas the same applies to butter other than that falling within the same tariff subheading as the pilot product;

Whereas, because of their composition and in particular their very high fat content, certain products falling within subheading 04.04 E II are likely, after importation into the Community, to be used as a basic product in place of butter for the manufacture of other goods; whereas, consequently, the levy must be fixed at a level which will ensure that outlets for Community produced butter used in the manufacture of these other goods are not diminished by the importation of the products in question;

Whereas the import levy on special milk for infants, Tilsit cheese and processed cheeses derived from Emmentaler, Gruyere or Appenzell as well as Cheddar and other cheeses intended for processing must be calculated consistently with relevant Community commitments;

Whereas the tariff nomenclature resulting from application of this Regulation is adopted in the Common Customs Tariff,

HAS ADOPTED THIS REGULATION:
