The following communication has been received from the Permanent Mission of Spain.

I refer to the Register of Processes and Control Measures for certain types of milk powder, which constitutes Annex Ic to the International Dairy Arrangement of 12 April 1979.

In Annex Ic there is a description of the denaturing process for milk powder in effect in Spain in 1979, when the text of the Arrangement was drawn up.

In order to update that information, my authorities have instructed me to communicate the following to you:

"The denaturing process for milk powder, whey powder and other milk products marketed in powder form is that established by the Ministerial Order of the Ministry of Finance dated 28 October 1980 (Official Gazette of 6 December) on denaturing processes for milk powder and whey. That Ministerial Order constitutes a clarification of the Order by the Ministry of Agriculture dated 30 October 1976, which established control of denatured milk powder and whey powder for use in animal feed."
