Product: (BTN)
Citrus fruit, fresh or dried (08.02)

(a) Description:

Use of diphenyl in treating citrus fruit is limited to 70 ppm. Retail product must be labelled.

(b) Comments by other countries:

United States: There is technical disagreement about the amount of diphenyl that should be allowed on citrus fruit destined for human consumption. The United States standards call for a tolerance of 110 ppm. The disparity between the two tolerances strongly inhibits United States exports.

(c) Comments by country maintaining the measures:

The EEC tolerance is applied internally as well as to imported products. It has been determined that treatment in excess of the tolerance is harmful.
Denmark

The Danish provisions relating to these commodity groups are necessary to prevent that imports of animals or animal products from introducing into Denmark of communicable diseases which do not exist in the country and to avert dissemination of communicable diseases which are being combatted or are under control.

The most important of these diseases are:

1. Brucellosis suis and brucellosis abortus (cattle and swine)
2. Pestis suum (swine)
3. Trichinosis (swine)
4. Vesicular stomatitis (swine)
5. Equine encephalitis (horses)
6. Pseudu pestis avium, Newcastle Disease (poultry).

For all these commodity groups the veterinary provisions are universally applied except under a few special arrangements - of no commercial significance - between the Nordic countries. These arrangements are justified by the uniform state of health of livestocks in the Nordic countries and by the uniform policies which the countries, after joint consultation, have adopted with respect to veterinary problems relating to imports of animals and animal products from areas outside Scandinavia.

The Danish veterinary authorities consider the provisions referred to in the list to be justified for health reasons. Past experience offers no grounds for modifying the existing rules which are designed to preserve Denmark's productive capacity and marketing possibilities to the extent that they depend on the state of health of the livestock.

Product: (BTN) Live poultry (01.05)

Import Restrictions

Country or group maintaining measures: France

Countries indicating an interest: United States

(a) Description:

HS

France does not admit poultry from any country that does not by law forbid the use of estrogens.

(Appplies also to item 02.02 and to certain products in item 16.02.)

(b) Comments by other countries:

(c) Comments by country maintaining the measures:

This measure is based on the Decree of 21 July 1962. France is followed in this respect by the five EEC countries as well as by other countries.

(Appplies also to item 02.02 and to certain products in 16.02.)
Product: (BTN) Meat and edible offals of the animals falling within headings 01.01-01.04, fresh, chilled or frozen (02.01)

Country or group maintaining measures: France

Countries indicating an interest: Canada United States

(a) Description:
Health and sanitary measures for imports of horse and mule meat

Conditions for imports: 1. The animals must be slaughtered in slaughter-houses accredited by France.

2. Products must be imported in the form of half- or quarter-carcasses.

Special incisions are required for liver and tongue.

(b) Comments by other countries:
United States: It would be helpful to know the disease(s) at which the measure is aimed, and whether any accredited slaughter-houses are located outside France.

(c) Comments by country maintaining the measures:
Small cuts of meat are more likely to cause food poisoning to the consumer than meat imported in quarters. This measure was introduced following a case of food poisoning.

The special incisions are a technical inspection method.
### Description:

Health and sanitary measure

France does not admit poultry from any country that does not by law forbid the use of estrogens.

Special incisions for tongue

### Comments by other countries:

**United States:** It would be helpful to have fuller information on the exemption for poultry liver.

### Comments by country maintaining the measures:

The measure is based on the Decree of 21 July 1962. France is followed in this respect by the five other EEC countries as well as by other countries.

This measure does not apply to poultry livers because the estrogen pellets are mainly found in the neck of poultry.

The special incisions are a technical inspection method.

<tbody>
<tr>
<td>Natural honey (04.06)</td>
<td>France</td>
<td>Canada</td>
</tr>
</tbody>
</table>

(a) **Description:**

Imports of honey must be accompanied by a health certificate issued by an accredited official of the supplying state, certifying that, within a radius of 5 kms. from the hive in which the honey was produced, no case has been recorded at least in the last six months of American fowl-brood, nosema or bee scariosis. *(Applicable to honey from all sources.)*

(b) **Comments by other countries:**

**Canada:** Some bees in France are subject to these diseases. There is no certificate required to show that honey produced in France is disease free.

(c) **Comments by country maintaining the measures:**

This measure is based on the Order dated 5 January 1957 on the campaign against bee diseases. In France, health controls exist which are virtually the same as those applicable to imported products.
Import Restrictions

Product: (BTN)
Sausages and the like, of meat, meat offal or animal blood (16.01)

Country or group maintaining measures: France
Countries indicating an interest: Brazil

(a) Description:

HS

Imported meat preserves must have been manufactured and prepared in accredited establishments. In addition the animals must have been slaughtered in accredited slaughter-houses. The degree of sterilization is verified at the frontier.

(b) Comments by other countries:

(c) Comments by country maintaining the measures:

This measure is based on the Orders of 8 April and 25 April 1964. A similar measure is applied by the Federal Republic of Germany and by the Netherlands.

</tr>
</tbody>
</table>

(a) **Description:**

HS

Only meat from plants which have been inspected by German authorities can be imported. (Applies also to 02.02, 02.03, 02.04, 02.05 and 02.06.)

Special incisions are required for liver and tongue. (Applies also to 02.02, 02.03, 02.04 and 02.06.)

(b) **Comments by other countries:**

**Australia:** It would be helpful to know whether this requirement will be continued in this present form once the EEC third country Veterinary Directive becomes operative and if it is modified, to what extent.

**Canada:** Other countries conducting inspections abroad (e.g. Canada, United States) cover the inspection costs out of government funds. (Applies also to 02.02, 02.03, 02.04, 02.05 and 02.06.)

**United States:** The standards appear such that it would be extremely difficult if not impossible to meet them. It would be helpful to know the degree to which German authorities have been able to admit meat from foreign plants; and which other countries have met the standards. (Applies also to 02.02, 02.03, 02.04, 02.05 and 02.06.)

Imports of beef cuts and of United States pork are prohibited.

(c) **Comments by country maintaining the measures:**

(Applies also to 02.02, 02.03, 02.04, 02.05 and 02.06.)

It is possible for German authorities to inspect plants in quite a number of meat exporting countries. This is especially so in Latin America.

(a) **Description:**

| HS: Meadow fescue and rye grass seeds |
| References: COM.AG/W/57. |

(b) **Comments by other countries:**

Canada: The German system of import quotas could, and in the past has limited Canadian exports. The Germany authorities have recognized the Canadian pedigree system as required under the OECD herbage scheme, but for some reason has excluded meadow fescue and rye grass seed.

(c) **Comments by country maintaining the measures:**

Measure is designed to protect farmers against certain unsuccessful grass seeds. Domestic seeds are subject to the same control as imported seeds.
## Import Restrictions

| Product: Sausages and the like, of meat, meat offal or animal blood (16.01) | Country or group maintaining measures: Germany, F.R. | Countries indicating an interest: Switzerland |

### (a) Description:

**HS**

For the purposes of the veterinary inspection carried out in accordance with the German legislation for controlling trichinae, a sample is sometimes taken from each slice of meat or from each prepacked commercial unit.

(Appplies also to item 16.02.)

### (b) Comments by other countries:

**Switzerland**: This is an extremely unfortunate practice which renders exports virtually impossible. Samples are taken in such a way that the consignments are practically no longer usable.

(Appplies also to item 16.02.)

### (c) Comments by country maintaining the measures:

(a) Description:

HS: Fresh pineapples

Imported products must be accompanied by health restriction certificates.

Derogations are published annually covering certain fruits and countries of origin.

Reference: COM.IND/12/Rev.2/item 174 (part).

(b) Comments by other countries:

Portugal: Imports of pineapples into Italy are subject to conditions laid down periodically by the Ministry of Agriculture and Forestry. For the period November 1969 to June 1970, these conditions included permission to import via a larger number of ports, stations and airports. Nevertheless, from July to October a total import prohibition is applied which places Portuguese exporters in a more serious situation because this period coincides with the tourist season, when they could expect an increase in their exports of this fruit.

The plant health certificate is required only for pineapples imported from Madagascar, Reunion, Colombia and the Azores. The Portuguese authorities have pointed out to the Italian authorities that the parasite in question has never been detected in the Azores. In response to an Italian suggestion, the Portuguese authorities have even certified that these parasites are not found in the Azores but the discriminatory requirement is nevertheless still applied.

In the Azores, pineapples are grown in hothouses and in excellent health conditions throughout the year. In addition, there is practically no risk of appearance of the micro-organism referred to in the region where the Azores are situated. On the other hand, this risk does exist in territories to which the discrimination is not applied.

</tr>
</tbody>
</table>

(a) **Description:**

HS

Prohibition on imports of fruit juice drinks with artificial colour added.

(b) **Comments by other countries:**

(c) **Comments by country maintaining the measures:**

The prohibition against the addition of artificial colours applies only to fruit juice drinks to be indicated as fruit drink and fruit lemonade, respectively; fruit drink being defined as a diluted fruit juice with, depending on the kind of fruit juice, at least 8 to 10 per cent and at most 20 per cent sugar; fruit lemonade as a diluted fruit juice consisting of at least 10 per cent fruit juice and having at least 8 per cent and at most 15 per cent sugar.

The prohibition against the addition of artificial colours does not apply to the drink to be indicated as carbonated lemonade. This is a clear solution of at least 8 per cent sugar with any of the acids: citric, tartaric, or lactic acid; containing, in addition, carbonic acid gas and which, apart from a number of optional ingredients, such as harmless essence, may contain notably fruit juice if less than 10 per cent.

(a) **Description**

HS: Brooding stock

(b) **Comments by other countries:**

**Canada:** Canada respects the efforts in the United Kingdom and in other countries to protect their flocks against Newcastle Disease, but wishes to make it clear that large sections of Canada are completely free of the disease, and that regional certification of this fact can be supplied. (Applies also to Australia, Finland, Malaysia, New Zealand, Norway and South Africa - BTN 01.05)

(c) **Comments by country maintaining the measures:**

Poultry breeding stock must meet adequate veterinary standards which are designed to protect native flocks. Imports from all but a few countries present a potential disease risk.

See also item 02.02.

</tbody>
</table>

(a) **Description:**

HS: Pigmeat, excluding offals

(b) **Comments by other countries:**

United States: In view of the border trade with Canada it would be helpful to know whether the same regulations apply to Canada.

(c) **Comments by country maintaining the measures:**

Swine fever (hog cholera) has been eliminated at very considerable expense. The most recent case was in June 1966. It is considered unwise to take the risk of exposure to the disease by importing meat from countries where the disease still exists or where a live vaccine is used.

Uncooked meat must meet animal health requirements, which require that the import of meat and meat products meet the standards of the Importation of Carcasses and Animal Products Order and the Diseases of Animals Act. A country wishing to send fresh or refrigerated meat to the United Kingdom must give full details of the animal disease statistics for recent years, the methods of controlling disease and the arrangements for post- and ante-mortem inspection at slaughterhouses. The United Kingdom veterinary officers will then take up in detail with the country concerned the question whether effective safeguards can be worked out. (Applies also to 02.02, 02.03, 02.04, 02.05 and 02.06. See also 16.01)
Product: (BTN) Dead poultry and edible offals thereof, (except liver), fresh, chilled or frozen (02.02)

Country or group maintaining measures: United Kingdom

Countries indicating an interest: Canada Pakistan

(a) Description:

Health and sanitary measure

All imports of poultry carcases and offal are subject to licence from 1 October 1971.

(b) Comments by other countries:

(c) Comments by country maintaining the measures:

Imports will be considered on the merits of the disease situation in the country of origin. Where imports are allowed they will be confined to dressed carcases or parts of carcases without accompanying offal. Licences for separate consignments of offal will be considered but only for processing in Great Britain. All consignments of poultry meat and offal will have to be accompanied by official veterinary certification that the birds from which the meat or offal is derived have been examined and found to be healthy both before and after slaughter and that they have not been in contact with significant poultry diseases. Order under the Diseases of Animals Act 1950.

**Countries indicating an interest:**
Canada

(a) **Description:**

HS

Benzoate of soda cannot be used as a preservative in canned vegetables.

(b) **Comments by other countries:**

(c) **Comments by country maintaining the measures:**

The Preservatives in Food Regulation (1962) allows preservatives in some pickles but not in canned vegetables because they are unnecessary since these are heat-processed. The food additives legislation does not allow the use of preservatives which are not needed. The United Kingdom authorities would entertain a showing of the need for adding benzoate of soda in the case of Canadian canned vegetables. (Applies also to 20.02.)
