Committee on Technical Barriers to Trade

LIST OF PRODUCTS COVERED BY THE NOTIFICATIONS
UNDER THE AGREEMENT ON TECHNICAL BARRIERS TO TRADE

Introduction

Under the GATT Agreement on Technical Barriers to Trade (Article 2.5) the Parties shall notify proposed national technical regulations through the GATT secretariat whenever:

- there is no relevant international standard to use as a basis for the technical regulation, or the technical content of a proposed technical regulation is not substantially the same as that of relevant international standards, and

- the technical regulation may have a significant effect on trade of other Parties.

Likewise, the Parties shall also notify proposed certification systems.

With the purpose of clarifying what categories of products of importance in international trade are subject to notified technical regulations or certification systems the GATT Committee on Technical Barriers to Trade has agreed that a list of such products should be drawn up. The list is presented in two parts, the first covering the notifications on technical regulations (pages 2 to 115) and the second covering those on certification systems (pages 116 to 139). It covers notifications over the 1980 to 1984 period classified according to the Customs Co-operation Council Nomenclature (CCCN). The classification is made at four-digit level. In cases where the products in question fall under part of a tariff heading, the CCCN number is followed by an 'ex'. Product descriptions that can be classified under several headings are reproduced under the first of these CCCN headings. Reference is also made to respective TBT-notification numbers (N) as well as to the Parties making the notifications.

The list is published and made available by Parties to relevant national standardizing bodies as it may indicate categories of products for which the elaboration of new international standards or revision/updating of such standards could prevent or eliminate technical barriers to trade.

For ease of reference, for items in the list where feasible, the relevant technical committees of the three international standards organizations, the International Organization for Standardization (ISO), the International Electrotechnical Commission (IEC) and the Codex Alimentarius Commission (CAC), are given.
