The following notification is being circulated in accordance with Article 10.4.

1. Party to Agreement notifying: **SWEDEN**

2. Agency responsible: Products Control Board

3. Notified under Article: 2.5.2 ✗ 2.6.1 7.3.2 7.4.1 Other:

4. Products covered (CCCN where applicable, otherwise national tariff heading):
   - Products containing carcinogenic substances

5. Title: Draft proposal for a list of substances which should be labelled with regard to cancer risk.

6. Description of content:
   According to the Ordinance on Classification and Labelling of products hazardous to health (SNFS 1982:5, PK:14), products which may cause cancer should be included in the risk category very dangerous products unless the probability for the products to cause cancer is considered to be very low. In the latter case the product should be included in the risk category dangerous products. In the guidelines published by the Products Control Board concerning application of the Labelling Ordinance criteria for the classification of substances "which may cause cancer" have been detailed.

   The Products Control Board now proposes to publish a recommendation list of chemicals associated with a risk of cancer and which the Board considers, at the time of issue, as relevant to be labelled. The list principally includes such substances (chemicals) that have been classified by the IARC with "sufficient evidence" for carcinogenicity to humans or animals.

7. Objective and rationale:
   Protection for human health

8. Relevant documents:
   Will be published as an Appendix to the Ordinance on Classification and Labelling of Products Hazardous to Health (SNFS 1982:5, PK:14)

9. Proposed dates of adoption and entry into force:
   The proposal will be adopted before the end of 1985 and enter into force when adopted

10. Final date for comments: 20 September 1985
