

# GENERAL AGREEMENT ON TARIFFS AND TRADE

---

RESTRICTED

Spec(85)28  
24 June 1985

## TRADE IN CERTAIN NATURAL RESOURCE PRODUCTS

### Fish and Fisheries Products

#### Draft Report of the Working Party

1. The Working Party was established by the Council at its meeting on 13 March 1984 (C/M/176) with the following terms of reference:

"To examine, in accordance with the Decision on Problems of Trade in Certain Natural Resource Products adopted at the Ministerial meeting of the CONTRACTING PARTIES in 1982 (BISD 29S/20), problems falling under the competence of the General Agreement relating to tariffs, non-tariff measures, and other factors affecting trade in the following natural resource products including in their semi-processed and processed forms, with a view to recommending possible solutions:

- (a) non-ferrous metals and minerals,
- (b) forestry products,
- (c) fish and fisheries products.

The Working Party shall conduct its examination on the basis of background documents prepared by the secretariat. Other relevant documentation, including any information provided by delegations, may also be considered.

The Working Party shall submit a separate report to the Council on each of the three areas mentioned above. Each report will be submitted to the Council when it is concluded, independently from progress in the other areas. A progress report will be submitted to the fortieth session of the CONTRACTING PARTIES in November 1984.

Work in each area will progress in accordance with its own time-frame, and not be linked to progress in the other areas".

2. Subsequently, the Council was informed at its meeting on 15/16 May 1984 (C/M/178) that Mr. M. Cartland (United Kingdom - Hong Kong) had assumed the chairmanship of the Working Party.

3. The Working Party held meetings on problems affecting trade in fish and fisheries products on 3 May, 27 June, 20/21 September 1984 and on 6/7 May, 1/2 July and [.....] 1985. Pursuant to its terms of reference, it submitted a progress report (covering the three product areas under its examination) to the fortieth session of the CONTRACTING PARTIES in November 1984 (MDF/3).

4. The Working Party has conducted its examination of problems of trade in fish and fisheries products on the basis of a background study and other documents prepared by the secretariat<sup>1</sup> as well as other relevant information submitted by some of its members<sup>2</sup>. It was understood that all this material would continue to form an integral part of any future work in this product area. Having concluded such an examination, the Working Party, further pursuant to its terms of reference, herewith submits to the Council its report on this product area, independently from progress in the other areas.

5. The Working Party noted that some of its members considered progress towards a further liberalization of trade in natural resource products to be of central importance and a key component of the GATT Work Programme established by the 1982 Ministerial Decision.

6. The Working Party paid considerable attention to background developments which occurred in the fishery sector during the last decade. Factors were considered such as increases in the costs of operating fishing vessels deriving from sharp upward movements in oil prices since the mid-seventies; the situation of overfishing of many stocks which had also emerged since the mid-seventies; and the reallocation of marine resources in terms of catch opportunities which has followed the almost generalized introduction by coastal states of 200-mile exclusive economic zones since 1977.

7. Some members stated that these developments should ultimately provide new export opportunities for the most efficient producers, including those who had benefited from a shift in their comparative advantage position, following the extension of national jurisdiction over marine resources within the 200-mile limit. However, these members were mostly concerned with the status of trade conditions in the fishery sector, as they found that in most key markets, fish access was seriously impeded by an array of trade barriers. In particular, they noted that the accumulated or total protection provided by tariffs and non-tariff measures affecting the same products resulted in a number of processing and manufacturing facilities for resource products being located rather more frequently behind the protection present in the major importing markets than in the resource exporting countries.

8. These members further pointed out that as long as such trade barriers were maintained, there would be distortions in the patterns of trade in resource products. If these were instead fully liberalized, not only would trade shifts likely occur between the primary and other levels of processing, but overall levels of trade would increase as demand reacted positively to more efficient production. In their view, therefore, the main underlying task of the Working Party should be that of signalling ways in which such trade expansion could be realized.

9. Some other members stated that recent developments in fishing conditions, while resulting in an expansion of international trade in fish and fisheries products, had also affected different fishing countries in a very different way, thereby creating a fundamental change

in international competition conditions. Serious efforts were required to be made by all countries in order to adjust their fisheries to the new circumstances. It would be essential, however, that this process, which might require a long period of adaptation, should aim at achieving balanced benefits for all trading countries, on the basis of reciprocal advantages and in accordance with the objectives of the General Agreement.

10. In some other views expressed, it was noted that in certain countries fishing was a traditional activity confronted, for various reasons, with special characteristics. In this connection, it was further noted that countries with a very high rate of per capita consumption and in which marine products constituted a substantial share of domestic animal protein consumption should legitimately pursue a policy aimed at achieving a substantial degree of supply security for their population.

11. The Working Party carried out a detailed examination of problems relating to tariffs, non-tariff measures, and other factors affecting trade in fish and fisheries products including in their semi-processed and processed form. It did so without prejudice to the views of delegations as to whether the problems identified fell within the competence of the General Agreement.

(a) Tariffs

12. Several members of the Working Party said that, notwithstanding the reductions negotiated in the course of several rounds of multilateral trade negotiations, specific product examples showed that many fisheries products continued to face high nominal tariffs in the major importing markets. These members also noted that, although in two major markets the average level of bindings was close to 100 per cent, in some other important markets several tariffs remained unbound.

13. Statistical data indicated that a substantial amount of trade in fish and fisheries products still occurred at the primary products level. This was despite the progress made during successive rounds of multilateral negotiations in liberalizing trade in these products, including at their semi-processed and processed levels. Some members thus argued that if an understanding of the possibly distorting effects on trade of tariffs was to be achieved, it was not enough merely to quote the nominal or ad valorem equivalent listed next to a tariff item. They indicated that the escalation in the nominal tariffs and the effective rate of tariff protection derived therefrom, generally provided a very much higher degree of protection. This issue was therefore regarded by several members as of major importance among other trade distorting factors. Specific examples were provided which appeared to support the view illustrated above.

14. It was also stressed, however, that it was a well-known fact that consumer preference was for fresh or simply preserved products. Moreover it was in the interest of the exporters to sell fish in the freshest and most unprocessed possible forms as these products normally commanded higher prices. There was, therefore, a basic difference among the natural resource products examined by the Working Party. Non-ferrous metals and minerals as well as forestry products come to completely different uses depending on whether they were in the form of raw material, semi-processed or processed. The same could only be said of fish and fisheries products to a limited extent. These statements were generally accepted. Some members, however, said that given, inter alia, the geographical distance between their fisheries and the importing markets, substantial room still existed to improve the value added embodied in many of their products for which the demand could not be met otherwise.

15. Some members reiterated the views that the existing coverage and effective margins of preference granted by current GSP schemes on fish and fisheries products were both inadequate. They also expressed serious concern for the continuing erosion of the GSP preferential margins vis-à-vis other existing preferential schemes.

16. Some other members noted that, in spite of the underlying difficulties in this sector, a number of tariff reductions on fishery products had been made in recent years, either as unilateral concessions or within the framework of the Tokyo Round tariff cuts.

17. With regard to existing preferential tariff arrangements, the view was expressed that tariff preferences, including those resulting from Article XXIV agreements, might operate to divert trade by causing shifts in imports from MFN to other suppliers. The member holding this view further stated that it was not his intention to challenge the GATT consistency of these agreements but merely to analyse, in this Working Party, the impact of tariff preferences on fish and fisheries products trade.

18. Referring to this argument, some members pointed out that, as a matter of principle, the issue of Article XXIV agreements fell outside the purview of the Working Party. They claimed nonetheless that Article XXIV agreements were legitimate under the General Agreement and although such agreements might have an influence on trade, they should not be presumed to have distorting trade effects. Another member, having recalled the fundamental importance of fishery in the GNP and the export trade of his country, stressed that the preferential agreement which his country had entered into with some of its traditional trading partners was an integral part of the free-trade arrangement of which his country was a member and fulfilled entirely the prerequisites of Article XXIV.

(b) Non-tariff measures

19. In its examination of this matter, the Working Party, in addition to background material prepared by the secretariat, had before it a considerable volume of detailed information submitted by some of its members<sup>1</sup>.

---

<sup>1</sup>See footnote 2 on page 2.

20. With regard to measures affecting imports, several members stated that quantitative restrictions, including tariff quotas, remained, in some cases a major obstacle to the development of export markets for fish and fisheries products. Several references were also made to the restrictive and discriminatory effect on trade which derived from the application of certain licensing systems currently in force in some important markets.

21. With respect to this latter point, the view was expressed that there would be little purpose in licensing products that were priced too high for the demand in the importing market. On the other hand, it was argued that the licensing system in question did not restrict trade, as it had allowed fish imports in the country to more than double in recent years.

22. One member noted that, in certain countries, given some of the traditional and special characteristics, the market should be controlled and production limitations should be maintained. Hence, where required in order to make the domestic policy measures applied more effective, imports should also be subject to some form of control. In his view, however, this Working Party was not considered to be an appropriate body for discussing the GATT consistency of certain existing quantitative restrictions on imports of fish and fishery products.

23. Some members further pointed out that the reference price system applied by a major importing market had serious restrictive effects on a number of products for which it had been implemented. The fiscal compensation tax levied by another country on the landed duty-paid value of several fish products also had similar effects.

24. Serious concern was also expressed by some members in connection with the important trade-distorting implications stemming from the broad utilization in most importing markets of strict health and sanitary regulations as well as very rigid packaging and labelling requirements. The proposal was made that in any future work in this product area, a detailed examination be carried out, in cooperation with the FAO/WHO Codex Alimentarius Commission, of health and sanitary measures maintained on the importation of fish and fisheries products with a view to assessing any possible trade-distorting effect not justified by their otherwise legitimate purposes.

25. With regard to measures affecting export and, more generally, competition, several members stressed that in their view, production and export subsidies should be included among the factors which were having a major distorting effect on fish and fisheries products trade.

26. Some members pointed out that massive programmes based on governmental financial assistance, were currently carried out in some major exporting countries with the aim of helping the restructuring of their domestic fishery industry, thereby unfairly upsetting the competitive conditions in this sector. It was noted that this situation could constitute the most significant single factor fostering a situation of uncertainty and difficulty in fish trade.

27. Some members also noted with concern that some of the financial assistance programmes referred to by some of the members were merely measures that their governments were taking within the framework of their general social policy and not specifically designed to assist the domestic fishery industry. On the other hand, in some of these countries, the fishery industry was, either nationally or regionally, a vital industry which required to be preserved. Moreover, present GATT disciplines were tolerant of the use of such measures.

28. There was, nevertheless, a general consensus that the effect on trade of some of the governmental assistance programmes examined might be an accepted concern for the Working Party, and that there was a need for more discipline in this area.

(c) Other factors

29. Some members pointed out that the Working Party, in accordance with its terms of reference, should deal exclusively with problems affecting trade in fish and fisheries products falling within the competence of the General Agreement. They emphasized that any attempt to link the question of extended fisheries jurisdictions with the task of the Working Party to analyse problems in fish trade was a dangerous concept for an open, multilateral trading system which should allow for the free play of comparative advantages.

30. The view was also expressed that access to resources was not a trade issue but one which should be more appropriately understood as an investment issue. As such, it was clearly beyond the purview of the Working Party, as nothing in the drafting history of the General Agreement would justify the contrary. In some other views expressed in this regard, it was specifically reiterated that questions relating to extended fishery jurisdictions did not fall within the competence of GATT.

31. While noting the arguments made above, as well as those developed during the discussion on the background situation of fisheries, some members argued that the international competitive conditions in this sector had been fundamentally altered by the general extension of fisheries jurisdictions since 1977. The new fishing régimes were indeed having an effect on the trading régimes, as, increasingly, a number of bilateral fishery agreements entered into since then, generally as a consequence of the new conditions of access to production, did include, inter alia, specific trading clauses.

32. The view was also expressed that this new situation in world fisheries clearly pointed to an imbalance in rights and obligations as, on the one hand, access to resources was determined entirely according to the coastal state's criteria, necessarily discriminatory, and outside any multilateral scrutiny. On the other hand, the price to be paid for such access was subject to the multilateral discipline of the General Agreement. This was an inbuilt contradiction in the present system which could, in the long term, contribute to an unsatisfactory situation, in terms of GATT, in the fishery context. In this view, the problem of access to resources had become one that GATT could not ignore. This was clear from the requirement by the resource-rich coastal states that commercial benefits be granted in payment for access, which establishes, on a bilateral basis, a direct link between liberalization of trade and access to resources. If the contracting parties would continue to consider this as outside the scope of GATT, the risk existed that tariff concessions would progressively escape the control of GATT and the strict application of the MFN. Contrary to what

had happened before the general extension of fisheries jurisdictions in 1977, the incentive to bind the tariffs under GATT, or to decrease tariffs already bound, which might serve as payment for badly-needed access to resources would diminish. The trend could even be reversed, and unbinding might result. In this way, the bilateral nature of agreements on access to surplus resources would increasingly be reflected in trade practices.

33. These members further noted that in order to get a meaningful understanding of the real problems affecting trade in this product area, the Working Party should pay attention to all relevant factors having a bearing on current trading conditions as well as on the multilaterally-agreed trading rules of the General Agreement. They felt that this was particularly important if the Working Party should ultimately attempt to recommend possible solutions for these problems within the framework of the General Agreement itself.
