Note to the Semi-annual Report Submitted by Canada
under Article 14:4 of the Agreement

Where an investigation is conducted in the context of a review of an existing anti-dumping measure, the date of completion of the review is shown in column 5, but generally it is not possible to state the margin of dumping in this column. This is because the review procedure was initiated to allow Canadian authorities to determine the current normal value of the imported product, in order to determine whether future imports of the product are dumped. As the margin of dumping is equal to the difference between the export price and the normal value, it is impossible to determine, a priori, the percentage margin of dumping. In addition, Canadian authorities compile statistical data concerning trade volume of the imported product only when reviewing a determination of injury in the context of possible revocation of the anti-dumping measure. As a result, statistical data on trade volume for columns 11, 12 and 13 is not available for certain investigations of existing anti-dumping measures.
